

FootStep™

FootStep™ by SensorEdge will take your practice to the next level. The system maps the pressure points on your patients' feet allowing you to see where they need the most relief and to fit them to the proper orthotics. Share this information with the patients, insurance companies and orthotics manufacturer to increase trust, consistency and efficiency.

The FootStep System

Mini Balance Plate

The SensorEdge Mini Balance Plate is the sensing part of the FootStep™ system. Patients stand on the plate and the densely packed sensors dynamically record a complete pressure profile. At 20.5" by 20.5", its small footprint makes for easy set-up, storage and use for your staff.

FootStep Software

The FootStep™ software has been streamlined to enable you to concentrate on your patients rather than complicated technology. The software features easy to read and navigate menus for patient selection and a simple but informative exam window that will allow C. Peds and other practitioners to engage and educate their patients.

The FootStep™ home screen. You can search through your existing patient files or create a new one.

The FootStep™ exam screen. Record static and dynamic pressure maps to review with patients and compare against ideal maps.

Advantages

Recruit New Patients

Attract new patients with FootStep™. Demonstrate the comprehensive care your practice provides and your passion to use the latest technology to go beyond conventional methods of care.

Build Trust

FootStep™ encourages patients to make decisions based on health and not solely on cost. Unbiased and empirical data supports your recommendations and builds trust with your patients.

Easy to Learn

The intuitive FootStep™ software is easily learned by practitioners no matter their age. Connect the sensor to your computer with a Wi-Fi connection, or use the USB data and charging cable.

Print Reports

Print detailed exam reports to use with orders, claims or to help educate your patients. All reports are branded with your name and contact information for easy access and clarity.

Patient Database

FootStep™ comes complete with a searchable database including contact information, diagnosis and historical exams. Easily recall any patient's information.

Custom Order Forms

FootStep™'s software streamlines your communication with manufacturers. Match the data from a patient file and session to the order forms you most commonly use.

Made in the U.S.A.

We design, build and support our solutions from our headquarters in Parsippany, NJ.

Technical Specifications

	Standard Definition	High Definition
Physical Size	20.5" x 20.5" x 1"
